

## New Optionals for Zapper and Frequency Generator: Conductive Bands and Slippers

### **Conductive Slippers with personal insoles for the whole family.**

Zapping through your feet: comfortable and effective. The insoles are made of highly conductive material and can be exchanged.

**The classic wrist bands** in new quality. The device can be used at full voltage . The wetted, metal-free, yellow special protective layer protects almost completely from any skin irritations or burns.

**Velcro conductive bands** for intensified zapping of body regions. When the bands are worn on the thighs, it is important to wear pants or stockings over them to prevent the electrodes from touching each other, causing a short circuit and reducing effective current flow. Wearing the Super Zapper DeLuxe on your belt you can freely move around while zapping. Positioning the bands on the upper thighs will direct the current to the genital and the lower abdominal area.
